Apache HTTP Server - Installation Wizard

Read This First

Read this Before Running Apache on Windows.

Apache
Version 1.3 (and up)

What is it?

Apache is an HTTP server, originally designed for Unix systems. This is the version of Apache for Microsoft Windows 2000, NT, 98, and 95 systems. Like the Unix version, it includes many frequently requested new features, and has an API that allows it to be extended to meet users' needs more easily. It also allows limited support for ISAPI extensions.

The Latest Version

Details of the latest version can be found on the Apache HTTP server project page under <http://httpd.apache.org/>.

```
C:\Windows\system32\cmd.exe
Welcome to go-pear!

Go-pear will install the 'pear' command and all the files needed by
it. This command is your tool for PEAR installation and maintenance.

Go-pear also lets you download and install the PEAR packages bundled
with PHP: DB, Net_Socket, Net_SMTP, Mail, XML_Parser, PHPUnit-0.6.2.

If you wish to abort, press Control-C now, or press Enter to continue:

HTTP proxy (http://user:password@proxy.myhost.com:port), or Enter for none::

Below is a suggested file layout for your new PEAR installation. To
change individual locations, type the number in front of the
directory. Type 'all' to change all of them or simply press Enter to
accept these locations.

1. Installation prefix           : C:\usr\php
2. Binaries directory           : $prefix
3. PHP code directory ($php_dir) : $prefix\pear
4. Documentation base directory : $php_dir\docs
5. Data base directory          : $php_dir\data
6. Tests base directory         : $php_dir\tests
7. php.exe path                 : C:\usr\php\cli\php.exe

1-7, 'all' or Enter to continue:

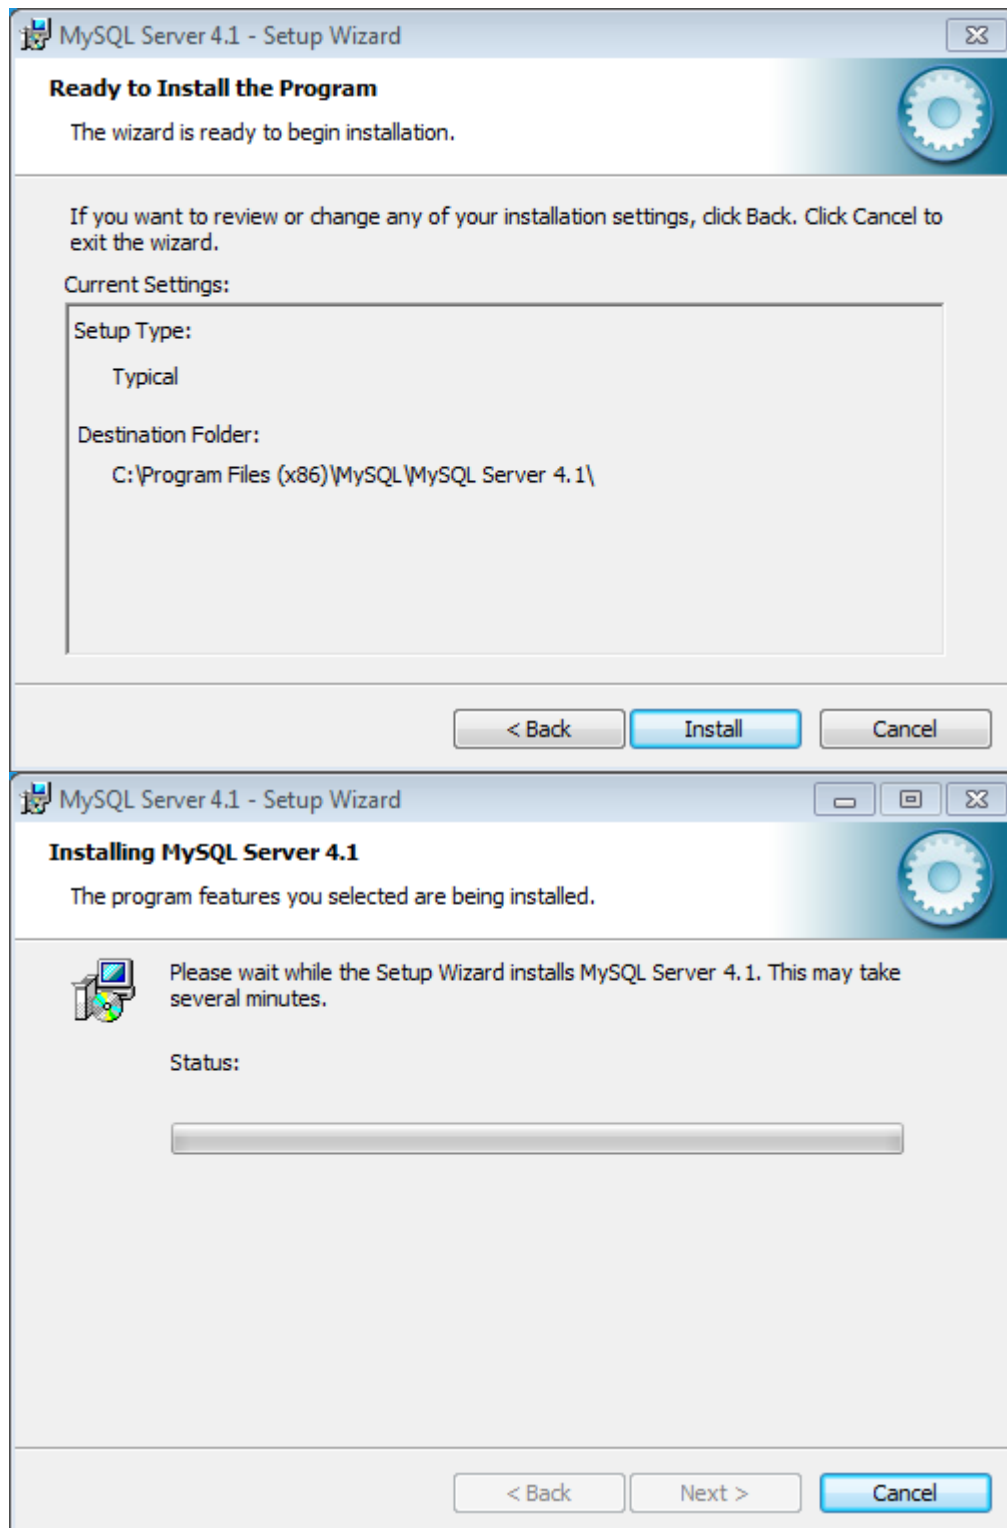

The following PEAR packages are bundled with PHP: DB, Net_Socket, Net_SMTP,
Mail, XML_Parser, PHPUnit-0.6.2.
Would you like to install these as well? [Y/n] : y
